

# Providing Right-Fit Elevators for Enhanced Accessibility

**M**eticulous planning is a must when installing mobility and accessibility aides for buildings. Along with being functional, they have to meet the requirements of the building's inhabitants. Instead of settling for a merely functional mobility aide system, Homeowners want the best alternatives to facilitate seamless accessibility for their families.

Access Elevator meets their needs with its customized elevator and mobility aide configurations.

The licensed elevator and general contractor helps clients build the perfect elevators and mobility aides that combine elegance with functionality. Blending design and usability, Access Elevator's accessibility aides serve as a focal point in the home's layout and enhance the accessibility of every resident.

"A good look at the client's needs helps us deliver better value. We can make mobility upgrades and home improvements through quick and meticulous remodeling," says Frank Wasilewski, VP of Access Elevator.

A robust partnership with the market-leading manufacturer of elevators and escalators—Savaria, Bruno—enables Access Elevator to install high-quality products that promise clients full access to homes with minimal maintenance costs.

A product line of all types and styles of elevators and other accessibility aides allows Access Elevator to install the right product that best suits the specifications of the building and the requirements of its inhabitants. Whether residential or commercial, Access Elevator makes it possible for differently-abled residents to enjoy greater independence in daily living.

The company does not believe in a 'one-size-fits-all' approach, because every client's accessibility needs vary. Some clients prefer to have the home elevator tucked away in a garage or storage area. Others would prefer to have it in a location that makes practical sense for how they live in their home.

When it comes to residential clients, Access Elevator's collaboration process begins with drawing an effective plan per the client's requirements. The company walks through the client's daily life and assesses every facet of their accessibility needs, including challenges in mobility and their health conditions,

before identifying the product that suits their needs. A comprehensive home inspection allows them to seamlessly retrofit the relevant elevator or mobility aide.

Access Elevator's team of professionals led by Wasilewski plays a vital role in planning and installing elevators and lifts. The team comprises managers, installation technicians, and administrators, who are all dedicated to solving clients' needs and ensuring their complete satisfaction.

These competencies are reflected in a recent case scenario where a dad faced the challenge of providing his disabled daughter access to the bathroom. He had to carry her up a flight of stairs. He contacted Access

Elevator and sought their help in installing a ramp or a vertical lift to enhance mobility for his daughter. Access Elevator analyzed the conditions of the house and decided to install an incline platform lift. Accordingly, they widened the stairs in the corridor and installed the mobility aid. The dad was able to wheel her daughter onto the lift, which carried her onto the upper level and gave her easy and safe access to the bathroom.

Access Elevator also focuses on healthcare facilities, offering them an array of medical mobility aides—ceiling-mounted and rolling patient lifts—that have ADA-compliant designs and superior durability. The lifts are installed to increase the accessibility of patients over a small flight of stairs or at the entrance of the hospitals.

The company is making a difference for the differently abled. The positive feedbacks from its clients are morale boosters for Access Elevator to keep investing in its team and improving its portfolio. No stone is left unturned when providing precise accessibility aides and making life easier for all.
